"Molecular characterization of the Bacillus anthracis main S-layer
component: evidence that it is the major cell-associated antigen.";

Mol. Microbiol. 23:1147-1155 (1997).

-! FUNCTION: THE S-LAYER IS A PARACRYSTALLINE MONO-LAYERED ASSEMBLY
OF PROTEINS WHICH COAT THE SURFACE OF BACTERIA.

-! SUBCELLULAR LOCATION: Cell wall.

-! SIMILARITY: CONTAINS 3 S-LAYER HOMOLOGY (SLH) DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bacillus anthracis.

THE TRABECULAR MESHWORK.

THE TRABECULAR LOCATION: LOCATED PREFERENTIALLY IN THE CILIARY
ROOTLET AND BASAL BODY OF THE CONNECTING CILIUM OF PHOTORECEPTOR
CELLS. AND IN THE ROUGH ENDOPLASMIC RESTICULUM. ALSO SECRETED.

TISSUE SPECIFICITY: EXPRESSED IN CILIARY BODY. IRIS, RETINA,
TRABECULAR NETWORK AND SCIERA BUT NOT IN LENS OR CORNEA. ALSO
EXPRESSED STRONGLY IN SKELETAL MUSCLE AND WEAKLY IN HEART, BRAIN,
TESTIS, LIVER, KIDNEY, THYROID AND EPIDDYMIS. NO EXPRESSION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=98217378; PubMed=9548973; Fingert J.H., Ying L., Swiderski R.E., Nystuen A.M., Arbour N.C., Alward W.L.M., Sheffield V.C., Stone E.M.; "Characterization and comparison of the human and mouse GLCIA glaucoma

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Seg. 10 1.

                                                                                                                          NOTICE: This sequence represents the full insert of this CDNA. No attempt has been made to verify whether this corresponds to the full-length of the original mRNA from which it was derived. We have tried to obtain double stranded, or double chemistry sequence across the entire clone, but potentially, there are areas in the sequence where this level of coverage was not achieved.

Nevertheless, we are confident of the accuracy of this sequence as all regions of low quality, as defined by PHRAP (P. Green, in preparation), were visually inspected and edited accordingly. The consensus quality values for this sequence have been submitted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              349

Con Feb 21, 2002 this sequence version replaced gi:1849138

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may note be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the

assembly was confirmed by restriction digest. The following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AL645948 207877 bp DNA linear ROD 16-FEB-2002 Mouse DNA sequence from clone RP23-298M7 on chromosome 11, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 317 TTCTTTTGTCATCACTTCATCCACCTTCTGCCATATCAACACAGTCCCTTTCCTATACAT 376

NOTE: This sequence may represent more than one clone.
NOTE: This is a 'working draft' sequence. It currently consists of 64 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

NOTE: This is a 'working draft' sequence. It currently
consists of 61 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N. but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                  NOTE: Estimated insert size may differ from sequence length
